Education

University of Waterloo — Waterloo, ON
Honours Bachelor of Computer Science - Artificial Intelligence Specialization — *Expected Graduation - Spring 2026*

Wilfrid Laurier University — Waterloo, ON
Honours Bachelor of Business Administration - President's Gold Scholarship — *Expected Graduation - Spring 2026*

Experience

Casca (YC S23) — Feb 2025 – Jan 2026
Software Engineer — *San Francisco, CA*

- **Owned Casca's CRA compliance reporting platform**, supporting CRA/HMDA/SBA/community-development reporting for 5–10 large SBA banks, by delivering end-to-end systems across TypeScript, tRPC, Prisma, PostgreSQL, and React/Next.js.
- Reduced report creation time from fully manual, hardcoded builds to ~10 minutes through a **metadata-driven report builder** with joins, filters, aggregations, validation, and exports.
- Enabled flexible reporting over **dynamic customer schemas**, supporting both fixed CRA domain schemas and org-defined schemas, by integrating the report builder with Casca's **Entity Graph / DataTableState** to query customer-defined tables and fields without hardcoded SQL.
- Accelerated report authoring further with an **AI translation layer**, enabling automatic generation of complete reports (measures, relationships, formatting, tables, and charts) from natural language, images, and external report artifacts.
- Worked in a **forward-deployed capacity** with Casca's design partner (**Live Oak Bank**), iterating on-site with bankers to gather feedback and rapidly ship improvements back into the core platform.
- Delivered performant, compliance-grade CRA mapping with sub-second interactions by building an offline **geospatial pipeline** (U.S. Census TIGER → LMI enrichment → MBTiles → S3/Mapbox) and enforcing **SOX-style report immutability** with end-to-end Playwright tests.

OMERS — Sep 2024 – Dec 2024
Full-Stack Software Engineer Intern — *Toronto, ON*

- Contributed to the redesign of the **myOMERS member dashboard**, OMERS' primary user-facing pension platform, by building and refining UI components (banners, pension summaries, timelines) using Next.js, TypeScript, and Tailwind.
- Implemented **data-driven dashboard features** (e.g., months to pension, benefit amounts) by integrating frontend components with backend APIs via **tRPC** and accessing services built in **Nest.js**.
- Shipped features in a **production agile environment** by collaborating in sprints, writing tests, and iterating on feedback to deliver reliable updates used by OMERS members.

Interac Corp. — Jan 2024 – Apr 2024
Back-End Software Developer Intern — *Toronto, ON*

- Owned a major test-quality initiative across **4 critical payment microservices**, increasing automated test coverage from **40% to 80%** using **JUnit and Mockito** and addressing coverage gaps and code smells to improve long-term maintainability.
- Reduced production defects by **30%** by strengthening unit and integration test suites, validating edge cases, and enforcing higher quality standards in CI for services handling high-volume payment flows.
- Contributed to backend security by implementing and validating **token-based CIAM access controls** in **Spring Boot APIs** for fraud history retrieval, supporting **PCI DSS compliance** and enterprise security requirements.

OMERS — Jan 2023 – Apr 2023
Back-End Software Engineer Intern — *Toronto, ON*

- Developed backend APIs for **Donna**, OMERS' internal pension processing platform, supporting pension termination workflows by implementing Spring Boot endpoints that handled fund transfers, account state changes, and related business rules.
- Built and tested APIs using **Java, Spring Boot, PostgreSQL**, and **JUnit/Mockito**, consistently achieving **80%+ unit test coverage**, and contributed to data access and migration work involving both legacy MySQL and PostgreSQL systems.

Technical Skills

Languages: Java, TypeScript, JavaScript, Python, C++, SQL
Frameworks/Tools: Spring Boot, React, Next.js, Node.js, tRPC, Nest.js, Tailwind, AWS, Docker, Git, Linux, JUnit, Mockito, Playwright, Heroku
Databases: PostgreSQL, MySQL, pgvector (PostgreSQL extension), Supabase, Firebase
